Fork-liftable Hoppers

Pallet Base with Casters and Optional Two-Piece Hinged Lid

Self-Dumping Steel Hoppers

Release the locking latch and the perfectly balanced hopper dumps its load, then returns automatically to an upright, locked position. Base and hopper are made of steel with a gray enamel finish. Hopper has extended sides on the pouring lip to prevent sideways scattering and is reinforced and braced for superior durability. The inside of the hopper is continuously welded for strength and to resist leaks. All models have a forklift entry for use as dump trucks. Shipped assembled.

Pallet base hoppers with casters have two rigid and two swivel casters. Casters add 9" to the overall height. Choose from cast iron and polyurethane wheels.

Also Available: Steel hinged lids to protect contents from weather and to keep trash from blowing (two-piece lids for 6 3/4 to 40 1/2 cu. ft. capacity hoppers; three-piece for 54 to 135 cu. ft. capacity hoppers).

Available in 11 or 7 Gauge Steel and in various sizes.
